

```
C Program Forking Separate Process

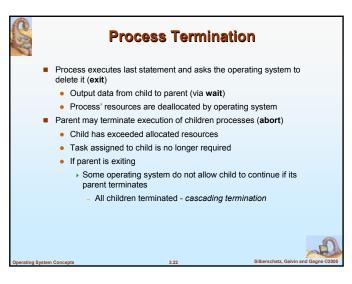

int main()
{
    Pid_t pid;
    /* fork another process */
    pid = fork();
    if (pid < 0) { /* error occurred */
        forint(stderr, "Fork Failed");
        exit(-1);
    }
    else if (pid == 0) { /* child process */
        execlp("/bin/ls", "Is", NULL);
    }
    else { /* parent process */
        /* parent will wait for the child to complete */
        wait (NULL);
        printf ("Child Complete");
        exit(0);
    }
}

Bounded-Buffer - Shared-Memory Solution

Shared data

#define BUFFER_SIZE 10
Typedef struct {
....
} item;

item buffer[BUFFER_SIZE];
int in = 0;
int out = 0;
Solution is correct, but can only use BUFFER_SIZE-1 elements
```

```
While (true) {

/* Produce an item */

while (((in = (in + 1) % BUFFER SIZE count) == out)

; /* do nothing -- no free buffers */

buffer[in] = item;

in = (in + 1) % BUFFER SIZE;

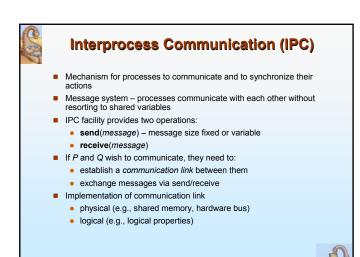

{

```

```
Bounded Buffer - Remove() Method
        while (true) {
          while (in == out)
              ; // do nothing -- nothing to consume
          // remove an item from the buffer
          item = buffer[out];
          out = (out + 1) % BUFFER SIZE;
        return item;
```

Indirect Communication

- Messages are directed and received from mailboxes (also referred to as ports)
 - Each mailbox has a unique id
 - Processes can communicate only if they share a mailbox
- Properties of communication link
 - · Link established only if processes share a common mailbox
 - · A link may be associated with many processes
 - Each pair of processes may share several communication
 - · Link may be unidirectional or bi-directional
- .e., OS must also support creation and manipulation of mailboxes/ports
